## Controlled Traffic Farming Alberta Website and Message Board launched

From the June 28, 2010 Issue of Agri-News Controlled Traffic Farming Alberta (CTFA) recently launched a website and web-based message board discussion group on controlled traffic farming. Peter Gamache, CTFA project leader says, "It's part of our plan to build a network of people interested in controlled traffic. CTF is pretty new to Alberta, so sharing ideas and questions among growers, agronomists, equipment dealers and researchers will be important."

The CTFA message board is a forum for sharing questions and experiences about controlled traffic, guidance, inter-row seeding, equipment, agronomics and other issues and observations. During the short time the message board has been operating, some good discussions on inter-row seeding and disk seeders had occurred.

To sign up for the forum, go to the website at [www.controlledtrafficfarming.org](http://www.controlledtrafficfarming.org) and follow the link. Registration is required. The website has some valuable links to controlled traffic farming websites, and during the summer, the program will be hosting some field tours and information will be posted to the web site.

Those who are already practicing CTF or inter-row seeding, or are interested these new concepts, are invited to contact Peter Gamache at 780-720-4346 or e-mail [pmgamache@gmail.com](mailto:pmgamache@gmail.com)

Funding for this project is provided by the Alberta Crop Industry Development Fund (ACIDF) and the Alberta Canola Producers Commission, Alberta Pulse Growers, **Alberta Barley Commission** and Alberta Winter Wheat Producers Commission.
